

To run the program:

Option A - Import the project into your chosen IDE (such as eclipse) and hit run as ... maven build

Option B - In windows command prompt or a terminal, you must first make sure that maven and java are both installed and in the build path.

To set path on window hit ctrl + R and type in cmd. in the command prompt type 'set PATH=%PATH%;<directory>'

Navigate to the directory containing the project. to build the project use the command 'mvn clean'

navigate into the targets directory, locate the jar file and use the command 'java -jar <filename>'
